3Dprint AM 2205

WAAM solid wire, duplex stainless steel

Material Type			
S31803	S322205	1.4462	X2CrNiMoN22-5-3

Characteristics

WAAM solid wire of 22 5 3 N L / ER2205 type designed for 3Dprinting of thinner structures with restricted cooling conditions.

Provides a ferritic-austenitic weld metal. The resulting microstructure is austenite with 45 – 55% ferrite. The printed structures have very good resistance to pitting and stress corrosion cracking in chloride containing environments after post print solution annealing.

Typical analysis of the solid wire (wt.-%)
